

Dictation that *doesn't leave* the machine.

DictateSI is a native Mac dictation tool built first for regulated industries: banks, insurers, law firms, title agencies. It fits any organization where privacy and security are paramount and voice data cannot touch a vendor's cloud. Speech is transcribed and polished by AI entirely on the employee's Mac. No audio upload, no account, no telemetry. Deployable air-gapped.

THE DATA PATH

Every step stays local

- 1 You speak**
Audio captured to memory, never written to disk.
- 2 Transcribed on-device**
Open-source Whisper engine, on the Mac's own silicon.
- 3 Polished on-device**
A small bundled AI model cleans filler and punctuation. GPU-accelerated, works offline.
- 4 Pasted at the cursor**
Into any app: email, CRM, case management.
- 5 Nothing leaves**
No audio, no text, no telemetry transmitted.

THE ARITHMETIC

What typing costs

Professionals type about 40 words a minute and speak about 120. The same memo takes roughly a third of the time by voice.

3+ hrs / person / week

back, at one hour of typing a day

\$180,000 / year

for a 25-person team at a \$45 loaded hourly cost

\$1.3M / year

for a 100-person department at 90 minutes daily

Estimates, not promises: run your own numbers with the calculator on our site, and measured pilot results replace this arithmetic.

EVIDENCE, NOT PROMISES

Built for your review

- ✓ **Tamper-evident audit log.** Hash-chained, metadata-only record proving what ran and that nothing left. Exportable; headline figure: off-device events, zero.
- ✓ **Machine-enforced invariants.** Automated tests fail the build if networking ever enters the local pipeline. They run on every commit.
- ✓ **Verified supply chain.** AI models pinned to immutable revisions, SHA-256-checked before install.
- ✓ **No account, no phone-home.** No login, no license server, no analytics.
- ✓ **Air-gap capable.** Pre-position the checksummed models and the machine never calls out.

THE PILOT

90 days, founder-led, flat fee

WHAT WE DO

- Come to you and install on a handful of seats, in person
- Train your team and tune vocabulary to your domain (loan terms, policy IDs, citations)
- Support your security review directly, with the founder in the room

WHAT YOU DO

- Pick 3 to 10 people who write all day
- Name one IT contact for deployment and review
- Agree success metrics with us up front, then judge us by them

HOW PRICING WORKS

- Flat fee for the 90-day pilot, agreed before we start
- Per-seat pricing for rollout is set together, from what the pilot shows
- No long-term commitment to begin
